

Emirhan Zileli (Computer Engineering Student)

Senior Computer Engineering student at Gazi University. Aiming to specialize in data science and machine learning. Valuing versatile development, I gain project management and teamwork experience through community efforts. Aspiring to contribute to the industry by reinforcing my knowledge with practical projects.

Experience

Software Developer (Part-Time) • **Gazi Institute of Informatics** (Nov 2024 - Present)

Developed face recognition-based access control systems using image processing, SQL, and Python. Ensured the sustainability of graduate exam systems by managing their software infrastructure. Improved my project management, technical analysis, and team coordination skills.

Intern (Online) • **QNB Online Internship** (Feb 2026 - Feb 2026)

Received comprehensive training from unit managers on the banking ecosystem, HQ, and branch operations. Attended "Inside Job" case study, strategic career design, and Güler Legacy teamwork workshops for financial awareness. Worked with HR on interview techniques and corporate competency development.

Software Developer Intern • **Neokod Arge Yazılım** (Jan 2026 - Feb 2026)

Created a MongoDB catalog for project data, ensured Elasticsearch integration, and automated data flow with Python scripts. Also, prepared technical research and feasibility reports for LLM (Large Language Model) integration.

Software Developer Intern • **TRT** (Jul 2025 - Aug 2025)

Took an active role in software development processes by working harmoniously within large corporate teams. Developed OCR and large language model (LLM) based applications using Python. Experienced corporate operations and disciplined project management principles.

Software Developer Intern • **Ramsa Defence** (Jun 2025 - Jul 2025)

Developed various software modules in defense industry projects using microcontrollers, Java, Python, and image processing. Worked on APIs for automation systems by taking part in the planning, design, implementation, and testing phases.

Education

Gölbaşı Final Akademi Schools

2016-2020

Gazi University
Faculty of Engineering

Computer Engineering
2021 - Present

Skills

- **Programming Languages:** Python, Java, JavaScript (TypeScript), SQL, PHP.
- **AI & Data:** PyTorch, TensorFlow, YOLO, OpenCV, LLM, NLP, Elasticsearch, Pandas, NumPy, OCR.
- **Backend & Database:** FastAPI, Node.js, Django, Laravel, RESTful API, PostgreSQL, MongoDB, MS SQL Server.
- **Frontend & Mobile:** React.js, Flutter, HTML/CSS, TailwindCSS, PyQt5.
- **DevOps & Tools:** Docker, Git/GitHub, Linux, KIBANA

Foreign Languages
English (B2)

Volunteer Work

Gazi AI Community - Head of Audit Board (Jul 2025 - Present)

Ensured the continuity of community operations by transferring experience to the new management; actively taking part in building a corporate and sustainable structure.

Gazi AI Community - Board Member (Jun 2024 - Jul 2025)

Planned and executed events and projects. Took responsibility for strategic planning, coordination, and team management. Organized technical events on defense and AI, gaining team management and project organization experience.

Gazi AI Community - Sponsorship Manager (Sep 2023 - Jun 2024)

Managed sponsorship processes during the community's first term. Improved teamwork and communication skills by organizing official correspondence, corporate relations, and sponsorship agreements.

Projeler

CareerCoach - AI Supported Career Platform (io.net Hackathon 2025 1st Place) [Python, FastAPI, React, Llama-3, PostgreSQL, Docker, TTS-STT, Selenium]

Developed a Llama-3 based full-stack platform managing end-to-end user career processes.

- **Smart Profile & ATS Management:** Designed a module that parses uploaded CVs via NLP to auto-generate profiles and calculate ATS (Applicant Tracking System) compatibility scores, offering improvement suggestions.
- **AI Interview Simulation:** Developed a simulation for realistic voice and text-based technical interviews using TTS and STT technologies.
- **Auto Job Match & Skill Gap Analysis:** Created an algorithm scanning job postings based on criteria and analyzing the skill gap between posting requirements and user competencies.
- **Assistant Tools:** Integrated dynamic generators for job-specific Cover Letters and professional email drafts.
- **Architecture:** Built an asynchronous microservice architecture on FastAPI and managed scalable deployment via Docker.

DroDet - Real-Time Drone Detection System [Python, YOLOv8, OpenCV, PyTorch, Object Tracking]

Developed a deep learning-based backend system for real-time drone detection from video streams for airspace security.

- **High Success Rate:** Achieved 98.4% mAP and 98.9% Precision through custom dataset model training, ensuring high accuracy. (Overall mAP 93.9%, Drone class mAP 98.4%).
 - **Object Tracking:** Minimized false positives and built a stable tracking structure by integrating algorithms that analyze the motion history of detected objects.
-

Video2Text - Video Content Text Extractor [Python, PaddleOCR, OpenCV, NumPy]

Developed an automated OCR pipeline extracting and indexing high-accuracy text data from video sources.

- **GPU-Powered OCR:** Set up a GPU-accelerated, high-performance text recognition flow using PaddleOCR and processing video frames at optimized intervals via OpenCV.
 - **Data Structuring:** Designed a recording module that separates detected texts from raw data, structures them in JSON format, and auto-indexes to the database.
-

EasyRefund - Refund Management System [PHP, Laravel, MySQL, Docker, REST API]

Developed a RESTful API-based backend architecture for refund tracking. Designed secure and Scribe-documented endpoints with Laravel; migrated the project to a scalable deployment environment by containerizing with Docker Compose.

B2B Communication & Process Automation (RPA) [Node.js, Puppeteer, Electron, Brevo API]

Developed desktop automation software eliminating manual data entry to accelerate corporate communication.

- **Process Automation:** Designed an RPA module using Puppeteer to simulate web workflows and structure scattered data into meaningful reports.
 - **Integration:** Built an end-to-end structure enabling automated transfer of obtained data to CRM systems via Brevo API and managing the communication cycle.
-

ESP32-BLE Alarm System – IoT Tabanlı Uyarı Sistemi[ESP32, Arduino, Android Java, BLE]

Developed an end-to-end IoT solution detecting electrical current changes and sending instant notifications to mobile devices.

- **System Architecture:** Designed the firmware processing sensor data on ESP32 and a Native Android (Java) app generating alarms by communicating via BLE protocol.
-

DDS - Deepfake Detection System [Python, PyTorch, MobileNetV2, Flask, React, Openai API]

Developed a full-stack AI platform detecting image manipulation with ~90% accuracy.

- **Model & Web Integration:** Integrated the classification model, trained by applying Transfer Learning on MobileNetV2, into an interactive web interface using Flask and React; added a chatbot module for user interaction.
-

Face Recognition System - Corporate Security [Python, PyTorch, SCRFD, ArcFace, PyQt5, SQL Server]

Developed an AI pipeline including SCRFD and ArcFace algorithms and a PyQt5-based management interface for personnel tracking. Connected the system to the SQL Server infrastructure by taking an active role in team integration processes.

QuakeSafe - Earthquake Safety App [Flutter, Google Maps API, Dart]

Designed the mobile side of the app developed for disaster management using Flutter. Ensured API integrations in coordination with the backend team by coding map services and user modules.

Microp - IoT Control System [JavaScript, Web Dashboard, IoT]

Developed a JavaScript-based web control panel for tracking sensor data. Managed the project to ensure workflow and technical coordination between hardware and software teams.
